

ABSTRACT OF THE DISCLOSURE

There is provided a system for recording and/or reproduction of broadcasting programs permits the

- 5 facilitation of selection and management of recorded videos in the manner of following the operations of general AV equipment such as televisions and video decks, in which virtual channels are assigned according to categories defined by a user, and programs corresponding
- 10 to the categories are recorded into the virtual channels, and since the recorded programs are set in array on a time base for simultaneous reproduction on each virtual channel, the user may happen to watch various recorded programs only by switching over the channels from one to
- 15 another or continuing to reproduce recorded programs in a single channel after application of power at any time, which results in quite passive style only sufficient for the user to watch the recorded programs.
